

Proposed Bluetooth-Enabled Smart Customer Interface Unit Architecture

High-Level Architecture

Information Flow

From MyPower Application to CIU

- Secure pairing
 - Customer authentication
 - Token transmission
 - Token confirmation
-

From CIU to Mobile Application

- Remaining units
 - Voltage
 - Current
 - Consumption information
 - Status notifications
-

Key Characteristics

- ✓ Backward compatible
- ✓ Existing prepaid infrastructure preserved
- ✓ Manual token entry remains available
- ✓ Secure Bluetooth communication
- ✓ Customer-centric design
- ✓ Supports future smart services

Design Principles

The proposed architecture is based on five principles:

Compatibility

No replacement of existing prepaid infrastructure.

Security

Authenticated and encrypted communication.

Simplicity

Minimal impact on existing customer workflows.

Scalability

Designed to support future digital services.

Customer Convenience

Enhances accessibility and interaction with prepaid electricity services.
